

I routinely travel to Dallas/Fort Worth and Houston. Having the use of XM Radio' Instant Traffic and Weather information routinely available has been a most valuable asset to me. I encourage you to allow this type of broadcast in the future, with even broader coverage. Having traffic and weather information routinely available is so much more valuable than the periodic traffic updates from local stations. In addition, having the timely information allows me to bypass travel bottlenecks, collisions, etc. and use my time and vehicle more effectively along with saving gasoline and minimizing pollution by not setting in traffic hold-ups. Please reject Petition 04-160 and allow satellite radio to continue to provide needed quality information to its customers. Customers need the variety and expanded information available from satellite radio in today's demanding world.
